

CCNA Security

Öngereksinimler: CCNA

<http://www.cliguru.com/CCNA>

Kurs Tanımı:

CCNA Security network'ün temellerini anlamış olan katılımcılara network güvenliği hakkında temel bilgi sağlamaya yönelik hazırlanmış bir eğitimidir.

IINS v2.0 – Implementing Cisco IOS Network Security (640-554)

- Common Security Threats
- Security and Cisco Routers
- AAA on Cisco Devices
- IOS ACLs
- Secure Network Management and Reporting
- Common Layer 2 Attacks
- Cisco Firewall Technologies
- Cisco IPS
- VPN Technologies

CCNA Security

IINS – Implementing Cisco IOS Network Security (640-554)

1. Common Security Threats

1.1. Describe common security threats

- 1.1.1. Common threats to the physical installation
- 1.1.2. Mitigation methods for common network attacks
- 1.1.3. Email-based threats
- 1.1.4. Web-based attacks
- 1.1.5. Mitigation methods for Worm, Virus, and Trojan Horse attacks
- 1.1.6. Phases of a secure network lifecycle
- 1.1.7. Security needs of a typical enterprise with a comprehensive security policy
- 1.1.8. Mobile/remote security
- 1.1.9. DLP

2. Security and Cisco Routers

2.1. Implement security on Cisco routers

- 2.1.1. CCP Security Audit feature
- 2.1.2. CCP One-Step Lockdown feature
- 2.1.3. Secure router access using strong encrypted passwords, and using IOS login enhancements, IPV6 security.
- 2.1.4. Multiple privilege levels
- 2.1.5. Role-based CLI
- 2.1.6. Cisco IOS image and configuration files

2.2. Describe securing the control, data and management plane

2.3. Describe CSM

2.4. Describe IPv4 to IPv6 transition

- 2.4.1. Reasons for IPv6
- 2.4.2. Understanding IPv6 addressing
- 2.4.3. Assigning IPv6 addresses
- 2.4.4. Routing considerations for IPv6

3. AAA on Cisco Devices

- 3.1. Implement authentication, authorization and accounting (AAA)
 - 3.1.1. AAA using CCP on routers
 - 3.1.2. AAA using CLI on routers and switches
 - 3.1.3. AAA on ASA
- 3.2. Describe TACACS+
- 3.3. Describe RADIUS
- 3.4. Describe AAA
 - 3.4.1. Authentication
 - 3.4.2. Authorization
 - 3.4.3. Accounting
- 3.5. Verify AAA functionality

4. IOS ACLs

- 4.1. Describe standard, extended, and named IP IOS ACLs to filter packets
 - 4.1.1. IPv4
 - 4.1.2. IPv6
 - 4.1.3. Object groups
 - 4.1.4. ACL operations
 - 4.1.5. Types of ACLs (dynamic, reflexive, time-based ACLs)
 - 4.1.6. ACL wild card masking
 - 4.1.7. Standard ACLs
 - 4.1.8. Extended ACLs
 - 4.1.9. Named ACLs
 - 4.1.10. VLSM
- 4.2. Describe considerations when building ACLs
 - 4.2.1. Sequencing of ACEs
 - 4.2.2. Modification of ACEs
- 4.3. Implement IP ACLs to mitigate threats in a network
 - 4.3.1. Filter IP traffic
 - 4.3.2. SNMP
 - 4.3.3. DDoS attacks
 - 4.3.4. CLI
 - 4.3.5. CCP
 - 4.3.6. IP ACLs to prevent IP spoofing
 - 4.3.7. VACLs

5. Secure Network Management and Reporting

5.1. Describe secure network management

- 5.1.1. In-band
- 5.1.2. Out of band
- 5.1.3. Management protocols
- 5.1.4. Management enclave
- 5.1.5. Management plane

5.2. Implement secure network management

- 5.2.1. SSH
- 5.2.2. syslog
- 5.2.3. SNMP
- 5.2.4. NTP
- 5.2.5. SCP
- 5.2.6. CLI
- 5.2.7. CCP
- 5.2.8. SSL

6. Common Layer 2 Attacks

6.1. Describe Layer 2 security using Cisco switches

- 6.1.1. STP attacks
- 6.1.2. ARP spoofing
- 6.1.3. MAC spoofing
- 6.1.4. CAM overflows
- 6.1.5. CDP/LLDP

6.2. Describe VLAN Security

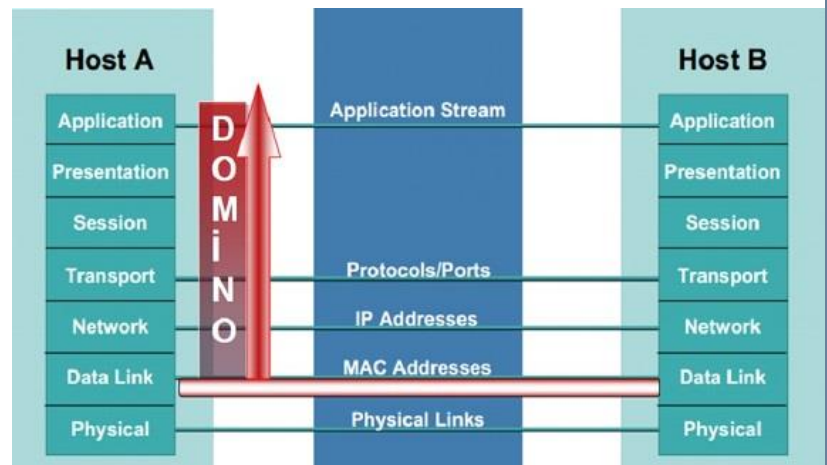

- 6.2.1. Voice VLAN
- 6.2.2. PVLAN
- 6.2.3. VLAN hopping
- 6.2.4. Native VLAN

6.3. Implement VLANs and trunking

- 6.3.1. VLAN definition
- 6.3.2. Grouping functions into VLANs
- 6.3.3. Considering traffic source to destination paths
- 6.3.4. Trunking
- 6.3.5. Native VLAN
- 6.3.6. VLAN trunking protocols
- 6.3.7. Inter-VLAN routing

6.4. Implement Spanning Tree

- 6.4.1. Potential issues with redundant switch topologies
- 6.4.2. STP operations
- 6.4.3. Resolving issues with STP

7. Cisco Firewall Technologies

- 7.1. Describe operational strengths and weaknesses of the different firewall technologies
 - 7.1.1. Proxy firewalls
 - 7.1.2. Packet and stateful packet
 - 7.1.3. Application firewall
 - 7.1.4. Personal firewall
- 7.2. Describe stateful firewalls
 - 7.2.1. Operations
 - 7.2.2. Function of the state table
- 7.3. Describe the types of NAT used in firewall technologies
 - 7.3.1. Static
 - 7.3.2. Dynamic
 - 7.3.3. PAT
- 7.4. Implement Zone Based Firewall using CCP
 - 7.4.1. Zone to zone
 - 7.4.2. Self zone
- 7.5. Implement the Cisco Adaptive Security Appliance (ASA)
 - 7.5.1. NAT
 - 7.5.2. ACL
 - 7.5.3. Default MPF
 - 7.5.4. Cisco ASA sec level
- 7.6. Implement NAT and PAT
 - 7.6.1. Functions of NAT, PAT, and NAT Overload
 - 7.6.2. Translating inside source addresses
 - 7.6.3. Overloading Inside global addresses

8. Cisco IPS

8.1. Describe IPS deployment considerations

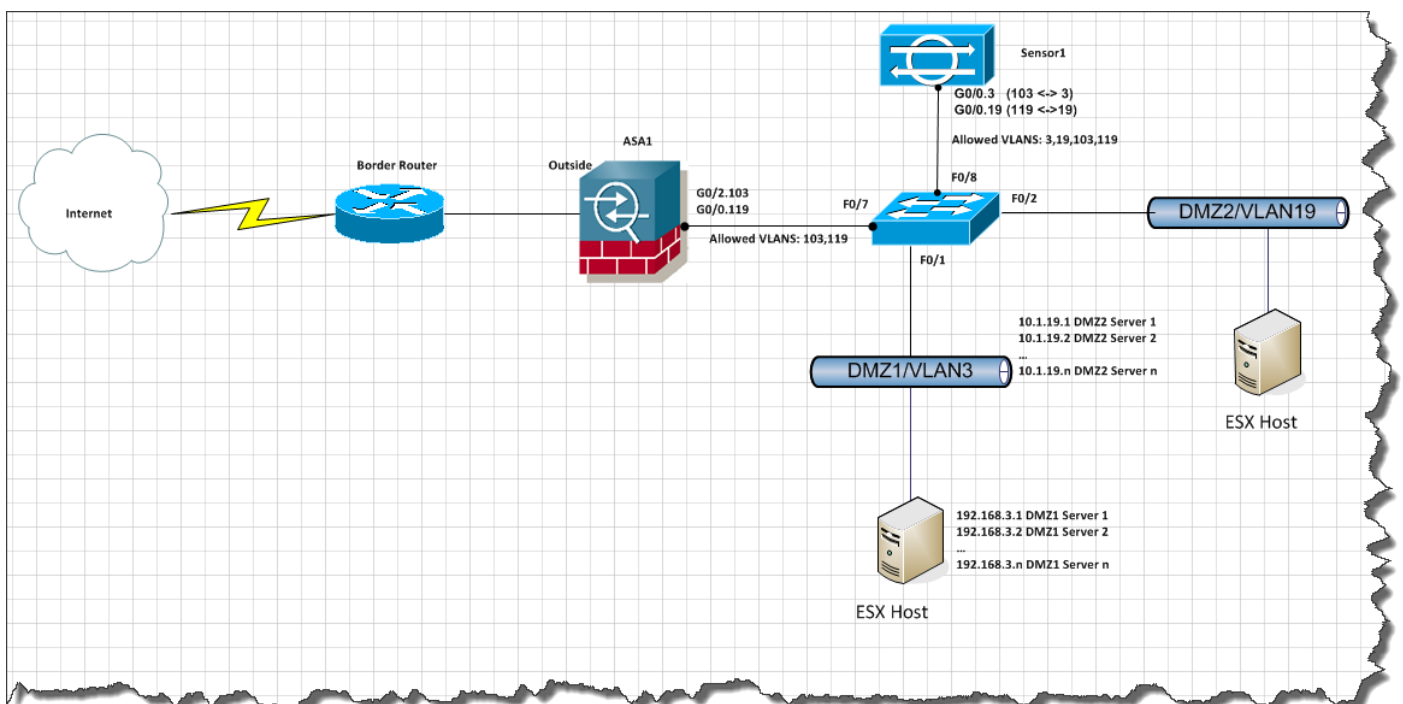

- 8.1.1. SPAN
- 8.1.2. IPS product portfolio
- 8.1.3. Placement
- 8.1.4. Caveats

8.2. Describe IPS technologies

- 8.2.1. Attack responses
- 8.2.2. Monitoring options
- 8.2.3. syslog
- 8.2.4. SDEE
- 8.2.5. Signature engines
- 8.2.6. Signatures
- 8.2.7. Global correlation and SIO
- 8.2.8. Network-based
- 8.2.9. Host-based

8.3. Configure Cisco I Logging OS IPS using CCP

- 8.3.1. Logging
- 8.3.2. Signatures

9. VPN Technologies

9.1. Describe the different methods used in cryptography

- 9.1.1. Symmetric
- 9.1.2. Asymmetric
- 9.1.3. HMAC
- 9.1.4. Message digest
- 9.1.5. PKI

9.2. Describe VPN technologies

- 9.2.1. IPsec
- 9.2.2. SSL

9.3. Describe the building blocks of IPsec

- 9.3.1. IKE
- 9.3.2. ESP
- 9.3.3. AH
- 9.3.4. Tunnel mode
- 9.3.5. Transport mode

9.4. Implement an IOS IPsec site-to-site VPN with pre-shared key authentication

- 9.4.1. CCP
- 9.4.2. CLI

9.5. Verify VPN operations

9.6. Implement SSL VPN using ASA device manager

- 9.6.1. Clientless
- 9.6.2. AnyConnect
